GLOBAL RESPONDERS GROUP

HOLISTIC APPROACH TO EMERGENCY RESPONSE PLANNING

Holistic response planning takes into account all aspects of emergency planning and ties them together into a single plan or emergency response philosophy. Stakeholders, departments, facilities or segments within the same business unit or organization need to work and plan together their approach to handling emergencies as a unified response. This shifting of focus in traditional philosophy to a holistic emergency response approach captures all aspects of risk mitigation.

Services Offered

Emergency Response Readiness - GRG can assist your facility or business by evaluating your emergency response readiness and making experience based recommendations of the facility or business needs to be ready to respond to an emergency. Many facilities and businesses already have much of the necessary equipment and resources, which GRG can organize into a capable response organization.

Emergency Response Planning - GRG has developed a holistic approach to emergency response planning for your facility or business. Holistic approach to emergency response planning takes into account all aspects of emergency planning and ties them together into a single plan or emergency response philosophy. Departments, facilities or segments within the same business unit or organization need to work and plan together their approach to handling emergencies as a unified response.

Independent Auditing and Reviews - GRG provides professional and experienced based independent auditing services and facility reviews. Services are available for project phase or existing operating facilities. Audits and reviews can be conducted onsite or via various venues depending on the scope of work. Clients receive a full written report on the activity and observations and recommendations for improvements.

Health & Safety Applications for Industrial Clients - GRG is able to provide health and safety consulting, manpower or services to your business or facility. Using top industry health and safety professionals, GRG can evaluate your existing safety program or provide guidance on establishing a new health and safety system.

Incident Command System Evaluation and Implementation - GRG believes that businesses' and facilities' success in approaching emergency response is based on two key elements: proper planning and competent command system being in place and well-practiced. GRG can assist your facility in establishing a proper command system, enhancing/improving your command system or writing/implementing a new system.

Accident Investigation - GRG can assist industrial sites and facilities with professional certified accident investigators to determine the root cause of industrial accidents and develop lessons learned. Prevention of future incidents often relies on thorough experienced base investigation which GRG can provide.

Design and Specifications - GRG staff members use experience and education when assisting your facility in the design of new systems or equipment to write proper specifications based on thorough review.

Commissioning and Testing of Suppression Systems - GRG provides high quality evaluation and testing of new fixed systems that have been installed at your facility for commissioning or acceptance testing.

Fire Brigade Management, Contract Fire Services, Manpower Provision and Staffing - GRG can assist industrial sites and facilities that want to provide in-house response capabilities but do not have a labor pool to choose from. GRG can provide subject matter experts, health and safety professionals, fire engineers and response personnel either on an ad-hoc or full-time basis. GRG can provide your facility with experienced professionals to manage your response system or team; outsource emergency response teams and firefighting services and site response. Service is available for facilities large or small and includes staffing of regional response bases for several industries in a region. Manpower services provided by GRG are vetted for experience, education, physical conditioning and aptitude.

Regional Response Bases - GRG is developing centralized response bases that will provide contract emergency response services to multiple facilities. Similar to regional oil spill bases, GRG applies the same philosophy to major incident response bases. The centrally located response facility will be equipped to mitigate the hazards of multiple facilities which pay a subscription fee reducing the cost to individual facilities dramatically, while maintaining or enhancing emergency response readiness.

Fire Engineering Services – GRG UK has merged with Haines Fire Safety Limited (HFSL) engineering company and now provides:

- Consequence Modelling
- Computer Fluid Dynamics
- Smoke Modelling & Evacuation Modelling
- Simulations
- ALARP Assessments
- Hydraulic Modelling & Surge Analysis
- BOWTIE Review
- Fire Safety Audits
- Deluge Valve Service & Maintenance
- Flow Verification Measurement

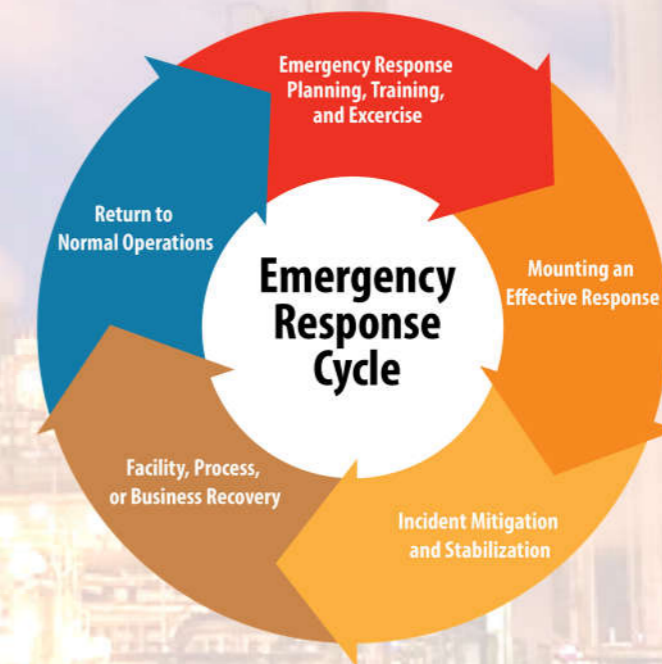

EMERGENCY RESPONSE

Facilities facing major emergencies need competent professional response. Global Responders Group (GRG) has response expertise available 24-hours 7-days per week to assist in incident and emergency mitigation. GRG can provide to Clients in need:

- Incident Management Team Subject Matter Experts
- Tactical Response Subject Matter Experts to assist on-site Commanders
- Partial or full response teams for major emergencies
- Relief crews for long-term emergencies and incident response
- Standby services for critical and high hazard work

GRG has response personnel available worldwide and can organize a response within hours of being notified by the facility or business. GRG responders bring with them thousands of hours of response experience and the critical knowledge required for mitigation of major emergencies and protect business continuity.

Successful mitigation and returning a business to its normal operating condition is critical to business continuity. GRG utilizes skill sets of seasoned professionals to respond to and assist businesses or facilities facing crises and potential disasters that can effect plant and surrounding populations; cause business interruptions; pose environment risk; or cause sustainable damage to a business's reputation.

Following successful response and mitigation of the emergency incident business operations are stabilized and returned to normal operating conditions. This process of business and operational continuity ensures economic viability of the facility which impacts the community and employees. Businesses or facilities facing real or potential high hazard incidents can use GRG as a resource for:

- Response and mitigation of incidents involving hazardous materials
- Flammable & combustible liquid storage tank fires
- Industrial facility incidents & industrial firefighting
- Facility or process fires or emergencies
- Natural disasters
- High hazard standby
- Escalation control
- Transportation emergencies
- Source and vapor control
